	TITLE JOURNAL COMMENT	REFERENCE AUTHORS TITLE JOURNAL REFERENCE AUTHORS
Center: WhiteHead Institute/ MIT Center for Genome Research Center code: WIBR Web site: http://www-seq.wi.mit.edu Contact: sequence_submissions@genome.wi.mit.edu Center clone name: 14108 Center clone name: 2210 **NOTE: This record contains 76 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. **However, it should not be assumed that this clone **Will be sequenced to completion. In the event that the record is updated, the accession number will **Deserved.** 755 1539: contig of 754 bp in length 2285 3047: contig of 755 bp in length **South of the same length **South of the same length **South of the same length **Add 3841: contig of 753 bp in length **South of the same len	Ferreira, P., FitzHugh, W., Forrest, C., Funke, R., Gage, D., Galagan, J., Gardyna, S., Grant, G., Hagos, B., Heaford, A., Horton, L., Howland, J.C., Johnson, R., Jones, C., Kann, L., Karatas, A., Klein, J., Lehoczky, J., Lieu, C., Locke, K., Macdonald, P., Marquis, N., McEwan, P., McGurk, A., McKernan, K., McLaughlin, J., Meldrim, J., McEwan, P., McGurk, A., McKernan, K., McLaughlin, J., Marquis, N., McEwan, P., McGurk, A., McKernan, K., McLaughlin, J., Marquis, N., McEwan, P., Naylor, J., Norman, C.H., O'Connor, T., O'Donnell, P., Peterson, K., Pollara, V., Riley, R., Roy, A., Santos, R., Severy, P., Stange-Thomann, N., Stojanovic, N., Subramanian, A., Talamas, J., Tesfaye, S., Tirrell, A., Vassiliev, H., Vo, A., Wheeler, J., Wu, X., Wyman, D., Ye, W.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2738
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence encodes C3G protein which is a ras protein guanine nucleotide exchange factor. The gene and protein (see R91597) are useful for diagnosis or treatment of malignant tumours associated with activation of the ras gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          encoding human secreted proteins (W88534 to W88756). The secreted protein CC gene sequences are deposited with the ATCC under deposit numbers ATCC CC 97979, 97974, 97975, 97976, 97977, 209007, 209008, 209009, 209010, CC 209011, 209080, 209081, 209082, 209083, 209084, 2090885, 209511. Host CC cells comprising recombinant vectors containing the nucleic acid consequences are used for the recombinant production of the secreted cc useful for preventing, treating or ameliorating medical conditions e.g. Cb yroteins The polynucleotide and amino acid sequences are useful for are useful for preventing, treating or ameliorating medical conditions e.g. Cc by determining the amount of the new polynptides in a sample or by determining the presence of mutations in the new polynucleotides. CC specific uses are described for each of the polynucleotides, based on this tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, neurodegenerative disorders, developmental abnormalities and foetal deficiencies, blood cdisorders, developmental abnormalities and foetal deficiencies, blood cdisorders, hepatic and renal diseases of the immune system, autoimmune ischemic shock, Alzheimer's and cognitive disorders, schizophrenia, crestenosis, prostate diseases, lymphomas, inflammation, allergies, cschemic shock, Alzheimer's and cognitive disorders involving osteoclasts such as osteoporosis, arthritis or malignancies, diseases of testes, lung or thymus, digestive/endocrine disorders, infections and AIDS. The present sequence represents a gene encoding a human secreted protein (see descriptor line for gene number and clone identification).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

The peptide(s) encoded by the sequence antagonise the interaction of GDP-exchange factor (GRF) with the p21-GDP complex and thereby regulate the activity of ras gene products. They can also be used to identify other compounds which can modulate GDP exchange. The coding sequence can be used to produce antisense products which can inhibit oncogene expression and for use in diagnosis e.g. detecting (over)expression of GRF for typing of cancers.

Provided the structure of similar immune deficiency virus proteins, and separate on 15/4/87 at claim 23; Fig 1B; 86pp; French.

Provided the contained in lambda SIV-1 which was deposited on 15/4/87 at the contained is contained in lambda SIV-1.), It is the contained the sequence inserted into a vector are claimed. Labelled fragments of communological properties in common with those of the peptides which have immunological properties in common with those of the peptide skeleton of the envelope protein of HIV-2 and also have a peptide structure in common with that of SIV-1 glycoprotein are claimed. Antigenic and immunogenic configurates contg. the peptides are useful for in vitro diagnosis of HIV-2 infection and some of them can be used as components of immunogens and configurate contained. The sequence is the manual form the sequence in contained in the sequence is sequenced to the sequence in the sequence is sequenced.

Saccharomyces cerevisiae, S. pombe and human ZPRI clones (see V04062-64) were identified using a mouse ZRPI clone (see V04061) as C probe. The isolated clones can be expressed in the usual host C cells. ZPRI is expressed at an elevated level in tumour derived colls, and is a marker for growth and differentiation processes, including malignant transformation of cells. ZPRI, optionally C expressed by gene therapy methods, can be used to inhibit the C proliferation of ZPRI associated malignant cells, or for the cexpression. Suppressors and modulators of ZPRI gene expression. Suppressors and modulators of ZPRI gene expression. Suppressors and modulators of ZPRI and or the composition of ZPRI suppressors and modulators of ZPRI and contact the composition of ZPRI suppressors and modulators of ZPRI and CPRI suppressors and modulators of ZPRI suppressors and coronary atheroma, and/or rheumatoid arthritis, psoriasis and coronary atheroma, and/or contact and CPRI suppressors and coronary atheroma.

C Prostate timour inducing gene-1 (PTI-1) (T37405) is a novel putative concogene that may contribute to carcinoma development in human prostate and other tissues. PTI-1 was initially identified in the human prostate and other tissues. PTI-1 was initially identified in the human prostate carcinoma LNCaP cell DNA-transfected tumour-derived murine CREF-Trans 6 cells using an RNA differential display method, and full-length cDNA can be directly cloned from an LNCaP cDNA can drull-length cDNA can be directly cloned from an LNCaP cDNA can comprises a unique 5 (330 bp region and can a full-length comprises a unique 5 (330 bp region and can constate and mutated elongation factor-1 alpha gene. It codes for a 46 kDa protein (W03518). PTI-2 (T37412), PTI-3 (T37413) cand a prostate carcinoma tumour antigen gene (T37414) were also clonentified. The PTI-1 gene can be used to design probes useful ce.9. for detection of metastatic cancer, or to produce recombinant proteins. Antisense sequences can be used in cancer therapy. A N.clavipes major ampullate gland cDNA library was screened with probes based on peptide fragments of the purified spider silk protein (see Q14185). Positive plaques were identified and the spider silk protein coding sequence was determined. See also Q14184.
          Recombinant spider silk proteins - useful for making fibres Recombinant spider silk proteins - useful for making fibres Recombinant spider silk protein from the present invention. Spider silk proteins, and peptide fragments within the proteins, can be produced and purified independently and can then be mixed and made into fibres that have higher tensile strengths and elasticity than naturally occurring fibres. The fibres can be used in mixed composites. The invention allows the two naturally occurring weightle clavipes silk proteins to be produced independently so that they can later be combined to form silk fibres of high tensile strengths.

New isolated granulcytic erhlichia nucleic acids - used to products for use in vaccines for inhibiting Ehrlichiosis an in detection and diagnosis

in detection and diagnosis.

Claim 2; Fig 1; 184pp; English.
                                                                                                                                                                        This sequence encodes two proteins which are associated with granulocytic ehrlichia (GE), W20.1 and W20.2 which have been isolated from HL60 cells infected with Ehrlichia sp. GE is an acute potentially fatal tick borne infection and the proteins described in this invention can be used in vaccines to elicit a beneficial immune response in an animal to GE. They can be used for inhibiting Ehrlichoisis in an animal to GE. They can be used for detection and diagnosis. Sequence 4833 BP; 1484 A; 797 C; 1114 G; 1438 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
